

**ABSTRACT**

A pitcher arrangement for a blending device (10), comprising a pitcher (22) and a pitcher support (28) which is mounted on the pitcher (22) via a connecting mechanism, preferably a threaded connection. A locking mechanism, by means of which the connecting mechanism can be locked in the assembled position thereof, is provided between the pitcher (22) and the pitcher support (28) when the pitcher (22) is in the assembled position.
